Jouthwark Council

DODSON STREET LONDON SE1

THE CONTENTS OF YOUR PACK

<u>Section</u>	<u>Page</u> No.	
1.	3.	Introduction Here we will explain the purpose of the Fire Safety Information Pack and why it is important that you read the contents.
2.	4.	Your Escape Routes We have provided specific information on how to make your way out of your home and block to a place of safety away from the building.
3.	13.	Your Block & Your Home – Dodson Street We have provided information within this section of the Fire Safety measures that you can find within your block and within your home.
4.	22.	Advice on what to do and what not to do No information pack would be complete without a Do's and Don'ts section. We have given some examples of potentially harmful practices that are common in a lot of blocks.
5.	25.	Contacts This last section will give you information on who to call for advice or to report a Fire Safety issue.

Section 1 - The Introduction

This Resident Fire Safety Information Pack contains some extremely valuable information relating to the Fire Safety measures both in your block and within your home. We encourage you to take time to read all the contents.

The purpose of producing this Pack is to provide you with as much information as possible in helping you become more aware of the various Fire Safety measures that exist within your block and within your home. We have also provided information on measures that you can adopt to ensure that yourself, your family and your neighbours are kept safe and secure and are aware of what you need to do in the event of a fire in the building.

We have included information on Fire Safety measures within your home. This includes your detection systems, fire doors and escape routes. We explain what the hazards are within your home and tips on checks you can make to reduce the risk of a fire breaking out.

You will also find information on your block including the equipment and construction materials that exist to ensure that if a fire does break out it is contained in the area where it started. If you need to evacuate the building we have provided detailed instructions of your escape route(s) in both graphic and text formats.

Not everyone takes Fire Safety seriously and we have added examples of hazardous practices that could hamper residents needing to escape and emergency services trying to fight a fire and assist evacuation.

If you require any further information on issues regarding Fire Safety we have included a number of contacts that you can call or email who will help you with any query you may have.

Southwark Council have an in-house Fire Safety Team with a primary role to carry out Fire Risk Assessments (FRAs). These involve visiting buildings and assessing various aspects of Fire Safety, possible sources of fire and checking escape routes. FRAs are required to cover the communal areas in a block and not the inside of each individual property. The Fire Risk Assessment is updated and reviewed as part of a programme of inspection dependant on the overall risk.

The Southwark Fire Safety Team also advise, assist and train Southwark staff, residents and attend evening tenant and residents meetings when required.

The Southwark Fire Safety Team work closely with the London Fire Brigade to ensure compliance is being met across the Southwark stock.

Section 2 - Your Escape Routes

This block has been built to protect residents in the event of a fire, so do not automatically assume you must leave your flat. The emergency services will decide whether the building needs to be evacuated. If it does, use your front door & stairs (unless the fire/smoke prevents this, in which case use the alternative means of escape). If you have an alternative means of escape this will be mentioned in the next section.

Basic advice:

- Familiarise yourself with the escape route(s) from your flat before an emergency. For most flats this is using the staircase (**NEVER A LIFT**).
- Keep all emergency access routes clear; your life or those of your family and neighbours could be endangered if you do not. Large plants, furniture or other belongings should not be stored on escape routes for this reason.
- If the fire is in your flat:
 - **DO NOT** stay to fight a fire.
 - Evacuate everyone from the flat.
 - Close all doors behind you.
 - Call the Fire Brigade (999) when safely away from the building and when it is safe to do so.
- If you detect a fire in another part of the building:
 - \circ Stay in your flat unless evacuated by the emergency services.
 - Call the Fire Brigade (999).
 - DO NOT tackle the fire yourself.
 - \circ Close all doors & windows to restrict the spread of smoke.
 - If you become affected by heat or smoke, leave your flat as described above.
 - IF IN DOUBT GET OUT!!!

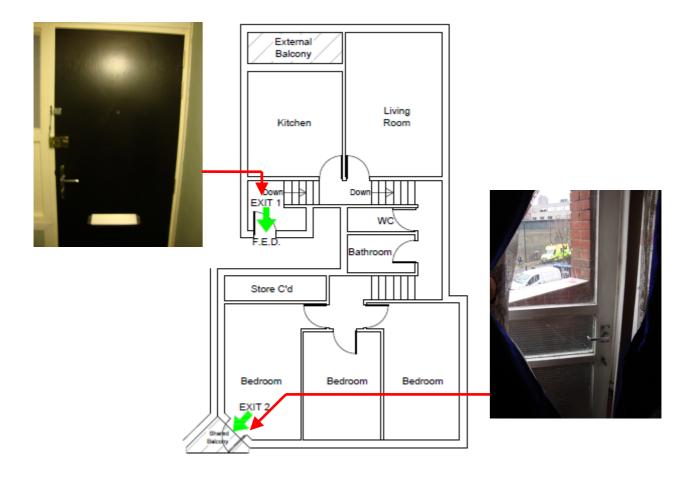

Your Escape Routes

If, and only if, fire and smoke is affecting you or your home, you should evacuate the premises immediately. Make your way to the stairwell as soon as possible, exit the building and remain a safe distance from the fire/building. Never attempt to use the lift if you are aware that there is a fire in the building.

Your home has been designed with either one or two means of escape in the event of a fire occurring, as pictured below. This will depend on where you are positioned in the block. There are five property types. You can identify which flat type you live in by the plans on the following pages.

Please have a look at the floor plans on the following pages and identify your property type. Then follow the directions on the plan so that you are aware of your escape route.

TYPE 1 Maisonette

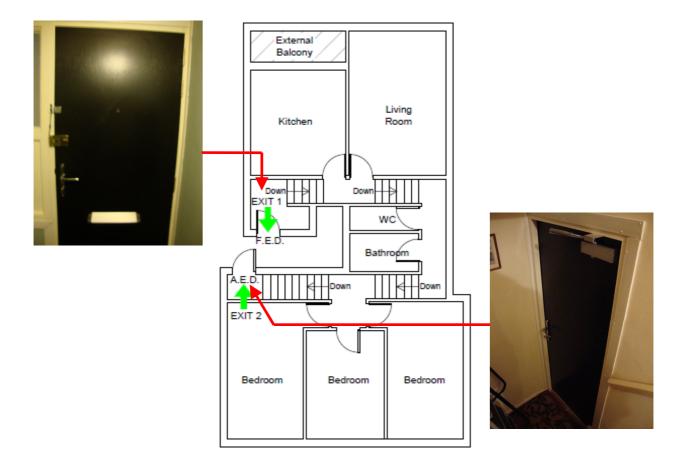

TYPE 1 MAISONETTE

In the majority of cases your main exit from your home in the event of an evacuation is by the front entrance door. However, if the fire is in your home or the front door is not accessible then you have an alternative refuge area.

It may be the case that the communal corridor could become unusable as an escape route (e.g. by being smoke logged). In this instance, a temporary refuge is available at the small private balcony area. This area is accessed from your bedroom (see photograph & plan above). From this balcony, if you close the door between the balcony and the bedroom, you will have temporary refuge from a fire within your dwelling and you will be able to raise the alert and await rescue by the Fire Brigade.

The plan of your escape routes can be seen on the previous and following pages.

TYPE 2 Maisonette

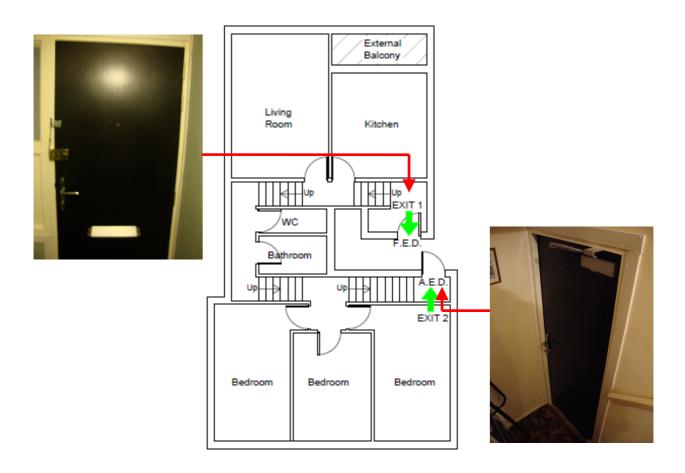

TYPE 2 MAISONETTE

In the majority of cases your main exit from your home in the event of an evacuation is by the front entrance door. However, if the fire is in your home or the front door is not accessible then you have an alternative. You can evacuate your home without using your front door via the alternative escape door at lower floor level of your flat which will lead you to the second floor level communal corridor. Signage on the communal corridors will direct you in the direction of the escape doors to the stairwells at either side of the building. You should descend down the stairwells and exit the building to a place of safety.

The plan of your escape routes can be seen on the following pages.

TYPE 3 Maisonette

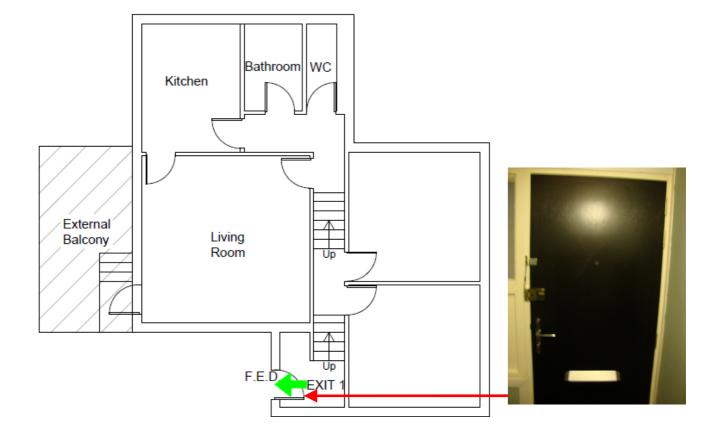

TYPE 3 MAISONETTE

In the majority of cases your main exit from your home in the event of an evacuation is by the front entrance door. However, if the fire is in your home or the front door is not accessible then you have an alternative. You can evacuate your home without using your front door via the alternative escape door at the upper floor level of your flat, which will lead you to the fourth floor communal corridor. Signage on the communal corridors will direct you to the escape doors of the stairwells at either side of the building. You should descend down the stairwells and exit the building to a place of safety.

The plan of your escape routes can be seen on the following pages.

TYPE 4 Maisonette

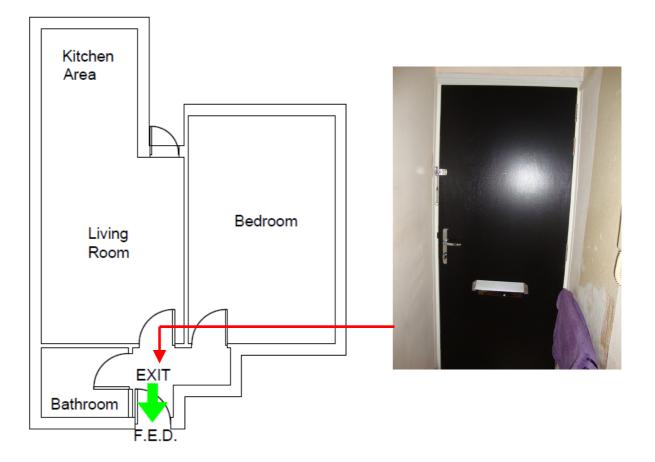

TYPE 4 MAISONETTE

You should evacuate your flat by your front door and ensure that the door is latched shut behind you. You will then find yourself in the communal corridor with access through the fire doors at both sides of the building to the stairwell enclosures.

Signage on the communal corridors will direct you to the escape doors of the stairwells at either side of the building. You should descend down the stairwells and exit the building to a place of safety.

The plan of your escape routes can be seen on the following pages.

TYPE 5 Maisonette

TYPE 5 MAISONETTE

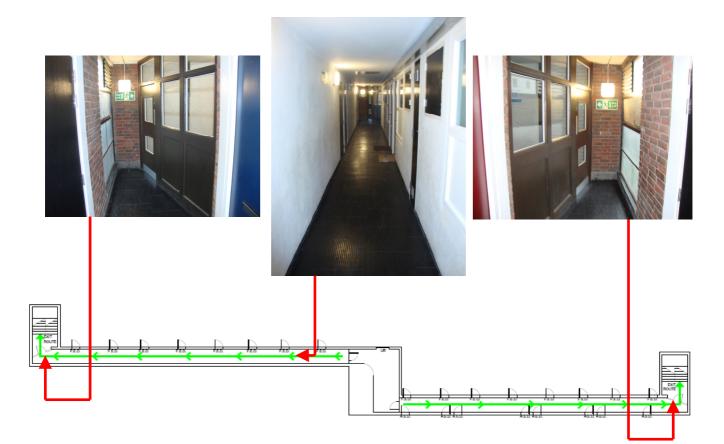

Your main exit from your home in the event of an evacuation is by the front entrance door. You will then be in the communal corridor. Signage on the communal corridors will direct you to the escape doors at either side of the building. You should exit to a place of safety away from the building.

The plan of your escape routes can be seen on the following pages.

Ground Floor Communal Area

Second Floor Communal Area

Fourth Floor Communal Area

If you continue down the escape stairwells to the Ground Floor you will exit through the exit doors (as pictured below) and to a place of safety away from the building.

Section 3 - Your Block and Your Home

Your Home

Your home was designed as a fire compartment. This means that all four walls, the ceiling and floor were constructed to provide at least 60 minutes protection from fire and smoke. Unless a fire starts in your home it should remain unaffected by smoke or fire for at least 60 minutes during which time the emergency services will either deal with the fire or instruct you to leave your home. If a fire starts within your home it should be contained there for the same length of time. **You however should evacuate immediately.** Some of the Fire Safety Measures in your home are detailed below.

Detection/Warning	Mains powered automatic smoke detectors with battery back up are installed within your home. In kitchens a heat detector rather than a smoke detector is installed. Heat detectors are installed in kitchens to reduce the number of 'false alarms' caused by frying, grilling or toasting food. Detectors should be interlinked so that if one detector is triggered, the alarm sounds in each & every alarm location. Remember to test your alarm on a weekly basis.	
-------------------	--	--

From entering your flat from the Protected Escape Route. It is therefore vitally important that if you have to leave your flat as a result of a fire that you ensure the door latches shut behind you. In addition, DO NOT make alterations to your door such as fitting extra locks and cat flaps, as this will compromise your safety.	Flat Entrance Door	therefore vitally important that if you have to leave your flat as a result of a fire that you ensure the door latches shut behind you. In addition, DO NOT make alterations to your door such as fitting extra locks and cat flaps, as this will compromise your	
---	--------------------	---	--

Internal Doors	Some of the internal doors to rooms in your home may also have some fire resistance. The doors have a solid core and can be recognised by smoke seals in the edges of the door that will expand in a fire and seal the door into the frame. An example of these seals can be seen below. It is recommended that when you leave your home for any length of time and when going to bed for the night that you ensure these doors are latched closed. It is again important that you DO NOT make alterations to the door such as additional locks and cat flaps, as this will compromise your safety.	
----------------	---	--

Your Block

Your block contains many safety measures that have been introduced both when the block was built and also in the years up to the present day. You may be aware of these measures but we are sure many of you may not be. This section intends to let you know what these measures are and the role they play in protecting residents from the effects of fire and smoke.

Emergency Lighting	These are lights that are provided in the protected escape routes and in the event of the electricity failing they will stay lit and guide you along the escape route and out of the building. Generally there are two types of emergency lighting. Some will not normally be lit but will have a small green or red light that indicates they are working. If the electricity fails they will illuminate. The other type remains lit and are on a protected circuit so even if the electricity is cut they will remain lit.	
--------------------	---	--

Protected Escape Routes	The protected escape routes are designed to allow for residents from all parts of the building to reach the outside without passing through a higher fire risk area. These routes are protected by materials that will provide a minimum of 60 minutes protection from fire and smoke and will enable residents and visitors to reach a place of safety should a fire occur in the block. All walls, floors and ceilings protect the route and generally the only break is doors but these also protect the route as they are fire doors. It is vitally important that the protected routes be kept clear of obstructions & combustible materials so that residents evacuating the building do not trip over bags of rubbish or discarded furniture. In addition, it would be extremely hazardous if any of these items caught fire in the protected escape route making it unusable.	<image/>
----------------------------	---	----------

Fire Doors

There is more to fire doors than meets the eye. A fire door is a complete installed door assembly comprising of a doorframe, door leaves, other panels, hardware, seals and any glazing that when closed is intended to resist the passage of fire and smoke. In the closed position, they protect the escape route which enables residents to evacuate.

You will find fire doors on flat entrance doors, across corridors on the escape route and on electrical cupboards. They are there to protect your means of escape and should **NEVER** be wedged/propped open. All fire doors should not be locked or fastened in such a way that means a key is required to make an escape.

Fire Hydrants	Fire Hydrants are found in the ground near your block. They are sometimes painted yellow but also are marked with 'FH' or 'Fire Hydrant'. Near to the hydrant on the wall there is a yellow 'H' plate. The plate indicates the size of the pipe and the distance the hydrant is away from the plate. In the example opposite it can be seen that the hydrant has a 180mm pipe and is 3 metres away from the H plate. They are used by the Fire Brigade to provide a supply of water from the mains to be fed into the Dry Riser Inlet. They are located in public footways or highways. Obstructing a hydrant is an

Fireman's Lift Control	If a fire breaks out in your block and the Fire Brigade are called it is likely that the electricity to the block will be switched off when they arrive. This means that the lift will not be operational. It is imperative that residents do not use the lift when they are aware of a fire as they may become trapped in the lift. The Fire Brigade however can control the lift for their own fire fighting purposes by using the control switch that you will find adjacent to the lift doors. REMEMBER – NEVER USE THE LIFT IF YOU ARE AWARE OF A FIRE.	FIRE CONTROL
------------------------	---	-----------------

Fire Exit Signs & Fire Action NoticesFire Exit Signs are designed to identify the means of escape in the event of a fire. These have been strategically positioned throughout the common areas of your block to identify the direction of travel in the event of a fire occurring. Fire Action Notices are designed to inform the occupants of the block what to do in the event of a fire. These have been strategically positioned throughout the common areas of the block what to do in the event of a fire. These have been strategically positioned throughout the common areas of the block what to do in the event of a fire. FIRE ACTION NOTICES

The following is a breakdown of the guidance given in the Fire Action Notices and an explanation of what the advice means.

If you discover a FIRE anywhere in the building:

Discovery of a fire can be by:

- sight seeing fire or smoke
- hearing (sound of burning, sound of alarm mechanical or verbal)

Anywhere in the building can be:

- your own home or other homes in your block
- communal area cupboards and rooms
- staircase, corridors, etc
- basement or roof
- refuse system waste chutes and bin chambers
- areas around (or close to) the external areas of the building

1. Raise the alarm by shouting "FIRE FIRE"

Attempt to alert others by shouting but don't expose yourself to danger by trying to make physical contact with neighbours.

2. If you are not in your own home or someone else's home in the building, evacuate the building immediately if it is safe to do so

- Attempt to leave the building by the most direct route that does not expose you to smoke or flames. REMEMBER KNOW YOUR ESCAPE ROUTES.
- Exit the building and move to a safe distance away. If your route out of the building is blocked by smoke or fire, move away from the fire and seek refuge in a protected area as far away from the fire as possible. A protected area is a place that is free of fire and has at least one substantial wall and door between yourself and the fire. Avoid placing yourself in a confined space.

3. Telephone the Fire Brigade on 999

- Use a mobile phone or landline to contact the Fire Brigade (999), keep calm and follow the
 operator's instructions. Further advice on calling the Fire Brigade is available at
 http://www.fireservice.co.uk/safety/dialling999
- Remember! 999 emergency calls to the Fire Brigade are free of charge and can be made on a mobile phone that does not have any credit.

RESIDENTS - If the fire is inside your home:

If you are at home and discover a fire in your home

1. Evacuate the building closing your Front Door behind you

- If the fire is behind a closed door do not attempt to open the door and do not attempt to tackle the fire.
- If the door of the room in which there is a fire is open from the outside close the door if safe to do so.
- Alert anyone else inside your home and leave by the nearest exit door of your home (that leads to a route out of the building) closing it shut behind you. REMEMBER KNOW YOUR ESCAPE ROUTES.
- Leave the building by the most direct route.

2. Remain a safe distance from the building and await the Fire Brigade

- A safe distance from the building is a place where you will not be affected by smoke, flames or debris from a developing fire or where you may obstruct the passage of other evacuees or fire fighters.
- When the Fire Brigade arrives, identify yourself as a resident and cooperate with their instructions.

RESIDENTS - If the fire is NOT in your home:

If the fire is in any other part of the building or grounds

1. 'STAY PUT' in your home unless you are directly affected by smoke or fire

Remain in your home unless the internal parts of your home are experiencing smoke or fire. Your home is designed to be a 'fire resistant' box that should offer you resistance against fire or smoke for a reasonable time during which the Fire Brigade will arrive and effect a rescue if necessary. If lots of people try to evacuate the building at the same time (if not under the control of the Fire Brigade) it may cause panic or injury and affect fire fighting or rescue operations.

2. If you are directly affected by smoke or fire - evacuate the building closing your Front Door behind you

- Alert any other people you live with and leave by the nearest exit door of your home (that leads to a route out of the building) closing it shut behind you. REMEMBER – KNOW YOUR ESCAPE ROUTES.
- Leave the building by the most direct route.

3. Remain a safe distance from the building and await the Fire Brigade

- A safe distance from the building is a place where you will not be affected by smoke, flames or debris that may emanate from a developing fire or where you may obstruct the passage of other evacuees or fire fighters.
- When the Fire Brigade arrive, identify yourself as a resident and cooperate with their instructions.

If you do evacuate the building

DO NOT use the lifts

The lifts are not fire proof and may leave you trapped in the lift if the fire causes a power failure.

DO NOT stop to collect personal belongings

Collecting personal belongings will delay your evacuation and carrying belongings may hinder your own and other evacuees escape.

DO NOT re-enter the building until authorised to do so

During a fire fighting and rescue operation the Fire Brigade will take charge of the building. They will inform all evacuees if and when it is safe to re-enter the building. If you re-enter the building before you are authorised by the Fire Brigade you may put yourself in danger and obstruct fire and rescue operations.

Section 4 – Advice on what to do and what to avoid

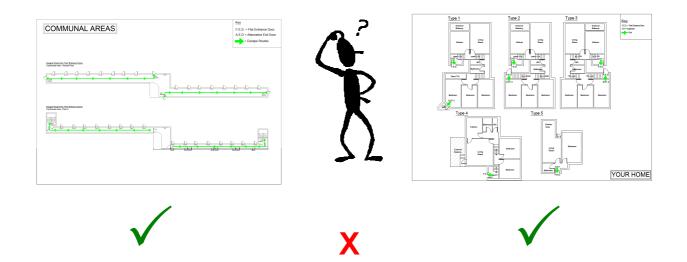

General Advice for Fire Prevention:

- Ensure a smoke alarm is fitted within the room/lobby (and landing where appropriate) opening onto the escape route.
- Avoid Calor gas, paraffin or electric bar fires wherever possible. Instead use plug-in radiators with safety electric plugs.
- Do not block access points in your flat or the communal areas of your block.
- Do not use rooms for storage or as workshops.
- Do not smoke in the communal areas or escape routes.
- Do not overload electrical sockets, do not cover heating appliances or leave lit candles or heaters close to curtains or furniture.
- Ensure electrical equipment is regularly inspected & serviced.
- Common ignition sources which should not be used include; naked flames, sparks, portable heaters, smoking materials, paper, combustible fabrics, plastics, paints, thinners, chemicals, flammable gases.

The following is some valuable Do's and Don'ts relating to Fire Safety measures in your block and within your home.

ESCAPE ROUTES...

• DO familiarise yourself with the escape routes from your home & the communal areas (including any alternative escape routes).

• DO NOT block the escape routes. These must be kept clear at all times

• DO NOT wedge/prop open any fire doors

Χ

X

IN THE EVENT OF A FIRE...

DO raise the alarm by shouting 'FIRE' and leave the building.

DO close the fire doors including your flat if you evacuate.

DO NOT use the lifts if you are aware of a fire.

DO use the stairs to leave the building.

DO call 999 but only when you are safely out of the building.

DO NOT smoke in the common areas of the building or the escape routes.

Some of this information has been produced by the London Fire Brigade. For further information on Fire Safety, please refer to their website. (<u>www.london-fire.gov.uk/FireSafety.asp</u>)

Section 5 - Contacts

If you have any queries or concerns relating to Fire Safety help is available from a number of sources. Equally, if you see something within your block that you feel compromises your safety please let us know.

London Borough of Southwark

Fire Safety Team	Tele: 0207 525 7565	Email: <u>FRA@southwark.gov.uk</u> .
London Fire Brigade	Tele: 0208 555 1200	Email: <u>info@london-fire.gov.uk</u>

For further information on the London Fire Brigade and General Fire Safety, please refer to the London Fire Brigade's website. (<u>http://www.london-fire.gov.uk/FireSafety.asp</u>)

If you would like to request and review the Fire Risk Assessment for your block, please use to the following website: (http://www.southwark.gov.uk/downloads/download/2403/register of fire risk assessments)
