

NEW SOUTHWARK PLAN MONITORING FRAMEWORK

This monitoring framework details the data we will collect and publish working towards a new digital monitoring system. Monitoring data and results will be published in the Authority Monitoring Report (AMR). The AMR sets out the type and amount of development and conservation taking place in Southwark. It sets out an evaluation of whether planning policies are making a difference and lets us assess how the policies can be improved by future plan making. These will enable us to measure our progress and success, ensuring we track and evaluate changes that make Southwark successful, such as full employment, health improvements, a more skilled labour market and places that are safe and clean. The AMR is now a website information hub, available online.

The monitoring framework will measure the indicators per policy. They will be monitored borough-wide, by vision area and site allocations.

This framework replaces the monitoring frameworks in the Aylesbury Area Action Plan, Canada Water Area Action Plan and Peckham and Nunhead Area Action Plan. Where there are relevant indicators from the AAPs they have been carried forward into this framework.
